

y

A grayscale heatmap is displayed within a square frame. The plot shows a smooth gradient of gray tones, with the darkest region (black) located in the lower-right quadrant and the lightest region (white) in the upper-left quadrant. A white dot is positioned at approximately the center of the plot. From this dot, a horizontal white line extends to the left edge of the plot, and a vertical white line extends downwards to the bottom edge. The label 'y' is placed to the left of the horizontal line, indicating the vertical axis.
